

SELF-LOADING MINI BATCHER

Contractors who pour small concrete pilings, footings, or bricklayers working on large projects will welcome the release of the U.Emme 250R self-loading mini batcher.

This universal mixer can be quickly and easily attached to skid steers, wheel loaders and excavators to mix small batches of concrete, mortar and other mixes on demand. Its self-loading bucket is designed for operators to quickly load aggregate, sand and cement, then mix, transport to work sites and pour exactly where needed.

Models are available from 115 litres to 800 litres per load output capacity. The U.Emme 250R-400 concrete mixer attachment comes complete with a skid-steer attaching kit, electronically controlled hydraulic valve, opening piston with protected rod, grate, pouring chute and hydraulic hoses with connectors.

Importer, Semco Equipment Sales, says the U.Emme mini batcher is an ideal productivity tool for building works, around mine sites, for local council use and landscapers.
