

CPL BUILDS BUSINESS ON QUALITY AND EFFICIENCY

New South Wales based CPL Australia Trenchless Technology has been undertaking directional drilling, trenching and excavation work since 1983. Several teams carry out works for Telstra, power and water services on commercial developments and residential subdivisions.

Owner, Eddy Lia said the quality of CPL's work and its fleet of special purpose equipment had made a major contribution to the company's growth. While primarily operating in the Sydney metropolitan area, the company had also completed projects as far afield as Wagga, Cobar, Mudgee, Narrabri and Grafton.

"We often need to work in constrained areas, so precise control is very important for us. The decision to use Takeuchi excavators was based on this equipment's very smooth operation and superior lifting capacity. A high level of control is essential for the precise action needed for craning pits and pipes, so this benefit was high on our list. The way the Takeuchi machines are balanced works very well for our type of work". He said.

"We have five zero-swing Takeuchi excavators ranging from 1.6 tonne to 6 tonne capacity. The oldest is five years of age and serviced by our in-house mechanic who is pleased with the equipment's lifelong trouble free performance.

"Our country work has derived from a combination of successful tenders and positive referrals. Having the right equipment for the job also enables us to deliver high quality work at competitive rates", Lia said.

"We're really happy with the Takeuchi excavators. Other specialised equipment includes a Case 960 trencher and a Case 860 trencher with a vibrating plough". He added.
