

**COMPACT AND VERSATILE AGRICULTURAL TRACTOR**

The New Holland Boomer tractor range is now available in NSW and ACT from Semco Equipment Sales centres in Thornton, Sydney and Queanbeyan.

“The Boomer range offers great benefits for anyone looking for a hard working, compact tractor that’s easy to operate and service. These tractors have efficient, BioDiesel ready engines that are both reliable and simple to service”, said Semco’s Satch Santilli.

“With New Holland’s optional SuperSteer axle system, these machines have the smallest turning circle of any compact tractor on the market. This means easier operation in tight spaces and better traction, comfort and performance”, Santilli said.

The Boomer 1030, 2000 and 3000 models equipped with SuperSteer feature a Sensitrak four wheel drive system. By comparing wheel speed and sensing slippage, the tractor automatically engages four wheel drive as needed. According to the company, this extends both the life of the tyres and driveline and protects the surface by preventing wheel spin and digging in.

A dual pump system has been designed to ensure maximum power by providing separate power for steering, while the second pump powers the loader, rear hitch or attachments. All models have night time operational capacity, with high-mounted dual-beam halogen headlights and corner lights.

On cab models, the SuperSuite cab is designed for full visibility through a full range loading operation while an inclined seat track ensures optimum comfort and visibility.

Time spent on maintenance is kept to a minimum, with all routine service points clustered to provide rapid turn-around. Oil checks and refuelling can be done without lifting the hood.
